S : Introduction to Division

For the tutor Begin with physical objects (stones, bottle caps, beans). Act out each problem before writing equations. Do not introduce long division or remainders unless the student is ready.

Section A: Sharing Equally Concrete)

For the tutor Show objects to the student (if you can!) and discuss how you would sort them equally to people.

1. There are 12 stones. Share them equally among 3 children. How many stones does each child get?

2. There are 15 oranges. Share them equally into 5 baskets. How many oranges go in each basket?

3. There are 8 pencils. Share them equally between 2 students. How many pencils does each student get?

Section B: Division as Repeated Subtraction

For the tutor Explain that division can mean subtracting the same number again and again until nothing is left.

Example: $12 \div 3$ means subtract 3 repeatedly: 12 9 6 3 0 (We subtracted 3 four times.)

1. $10 \div 2$

   Subtract 2 each time:

   10 _____ _____ _____ 0

   How many times did you subtract? _____

2. $15 \div 5$

   15 _____ _____ 0

   How many times? _____

3. $18 \div 3 =$ _____

4. $16 \div 4 =$ _____

Section C: Using Multiplication to Check

For the tutor Division and multiplication are connected. If $12 \div 3 = 4$, then 4 $3 = 12$.

1. $20 \div 5 =$ _____

   Check: _____ $5 = 20$

2. $14 \div 2 =$ _____

   Check: _____ $2 = 14$

3. $24 \div 6 =$ _____

4. $9 \div 3 =$ _____

Section D: How Many Groups Can We Make?

For the tutor This type of division asks: "How many times does this number t into that number?"

1. There are 20 biscuits. Each plate holds 4 biscuits. How many plates can we ll? Divide / Multiply: _____

2. A farmer has 18 eggs. He puts 3 eggs in each box. How many boxes can he ll? Divide / Multiply: _____

3. There are 16 students. 4 students stand in each row. How many rows are there? Divide / Multiply: _____

Section E: True or False Reasoning)

1. $12 \div 3 = 5$ True False
2. $15 \div 5 = 3$ True False
3. $18 \div 6 = 2$ True False
4. $10 \div 2 = 6$ True False
5. If $4 \quad 5 = 20$, then $20 \div 5 = 4$ True False
6. $0 \div 3 = 0$ True False

Section F: Explain in Your Own Words

For the tutor Listen to how the student explains division. Understanding is more important than speed.

1. What does division mean?
2. How is division connected to multiplication?
